#### SECTION-A

- A) Below given is an account of the dreaded disease Malaria with five blanks with the options provided PQRS to make it a sensible one. Choose the correct options.

Prevention is better than cure; and it is recognised that the only way to get rid of malaria is to get rid of the mosquitoes which cause it. Malaria is always associated \_\_\_1\_\_\_. This is not because the land is damp; but because the standing water is the breeding place of the mosquitoes , which begins its life \_\_\_2\_\_\_ in the water. Malaria does not frequently occur in \_\_\_3\_\_\_ because mosquitoes can not breed there. The only way to destroy mosquitoes is to prevent their \_\_\_4\_\_\_. This can be done by draining all ponds and pools; and by keeping them covered in the breeding season with a film of kerosene oil which , by depriving the larva of air , kills them.

P – dry desert counties

Q – Breeding in standing water

R – Damp and marshy land

S – as a larva living

2

The male insects are generally smaller than the female insects of the same species. However, there are exceptions to this theory. Size and strength would be an added advantage to the males as they generally engage in a battle over the possession of a female and in the case of stag-beetles the males are comparatively larger than the females. There are, however, other species of beetles which are known to fight together, where the males exceed the females in size though this is still unclear. In some cases, as with the huge *Dynastes* and *Megasoma*, we can at least see no necessity for the males to be smaller than the females in order to mature faster.

17. According to the author, the traits of the male stag-beetles include which of the following?

- i) Active intelligence

- ii) Superior bulk
- iii) Aggressive nature
- iv) Laziness
